

# Masterclasses in Electrocardiography

## Lecture 1: The Footprints of Aberrant Ventricular Conduction.

**Speaker:** Assoc Prof Harry G Mond  
**Date:** 11th April  
**Time:** 1:30pm (GMT+8)  
**Duration:** 30 minutes + questions

Assoc Prof  
Harry G Mond  
FAPHS

### Program Learning Objectives:

One of the most misdiagnosed atrial tachyarrhythmias seen on both the 12-lead ECG and ambulatory ECG monitoring is aberrant ventricular conduction, reported as ventricular tachycardia. Patients may then undergo inappropriate and potentially dangerous treatment such as the insertion of an implantable cardioverter-defibrillator. This webinar lecture will discuss in detail the physiology of aberrant ventricular conduction and how to recognise the footprints.
